

FOLDING TABLE

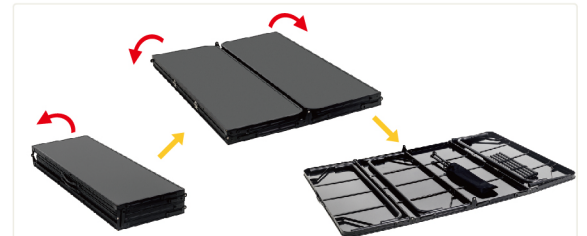

INSTALLATION STEPS

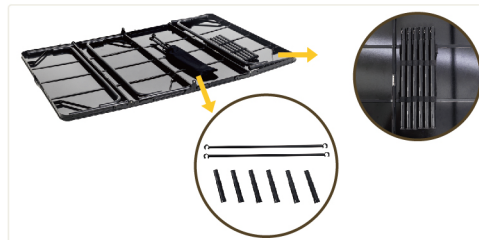

1 Open the carton from the top to access the built-in handle. Lift the handle to remove the product.

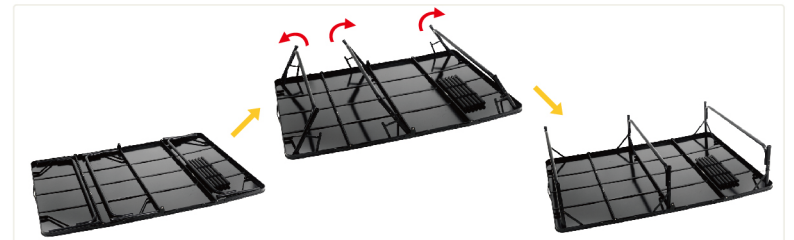

2 There is a latch on each side. Unlock both latches to release the table.

3 Unfold the four panels step by step to form the tabletop.

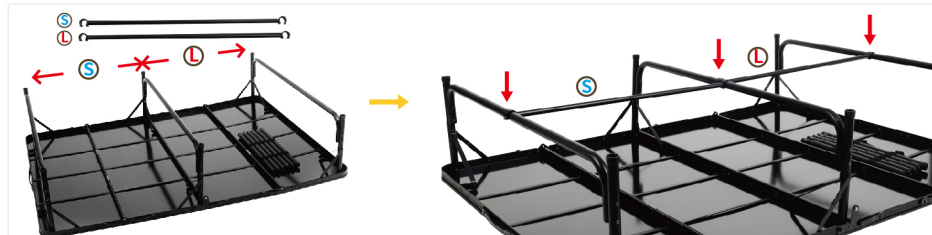

4 The set includes: 1 tabletop, 6 standard leg tubes, 6 extended leg tubes, and 2 stretchers (1 long, 1 short)

5 Unfold the U-shaped tubes at the base to prepare for leg installation.

6 Lock the triangular joints between the tabletop and the legs. Make sure the legs are at a 90° angle for stability.

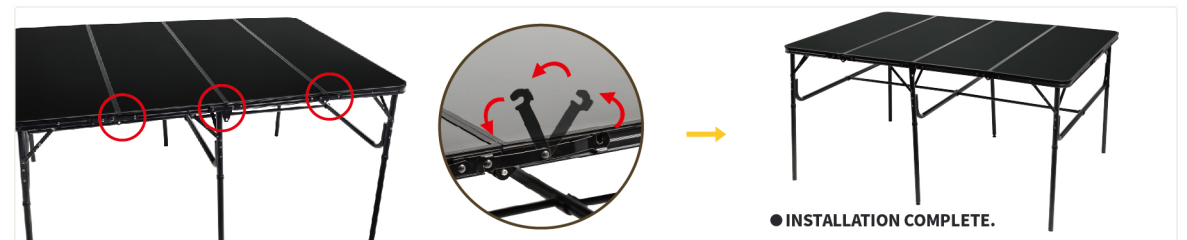

7 Use the 2 tabletop stabilizer bars included in the accessory kit. Install stretchers between the horizontal U-shaped tubes, matching their length, under the tabletop, to enhance the overall stability of the table. (The length-specific layout is shown in the diagram.)

8 Insert the narrower end of the leg tube into the base socket until it clicks at the table base to complete assembly. (Table base height after installation: 75 cm)

9 To increase the table height, insert the standard leg tube into the height-extension tube first, then insert the assembled leg into the base. (Height increases from 75 cm to the extended height after installing the extension tubes.)

10 Rotate all metal buckles on both sides to lock the tabletop in place. (3 per side, 6 total)

● INSTALLATION COMPLETE.
